

Margaret Peachey Burbidge (1919)

1939

“non si svolsero cerimonie per la mia laurea, nell'estate del '39 era ovvio che l'Inghilterra andava incontro alla guerra con la Germania.”

“Avendo letto un annuncio su The Observer per una ricerca di personale all'Università Carnegie per il Mt. Wilson Observatory feci domanda”

“La lettera di rifiuto diceva semplicemente che i posti al Carnegie Fellowship erano riservati agli uomini. Apparentemente alle donne non era concesso l'uso dei telescopi di Mt. Wilson”

Synthesis of the Elements in Stars*

E. MARGARET BURHIDGE, R. BURHIDGE, WILLIAM A. FOWLER, AND F. HOYLE

*California Radiation Laboratory, California Institute of Technology, and
Mount Wilson and Palomar Observatories, Carnegie Institution of Washington,
California Institute of Technology, Pasadena, California*

"It is the stars, The stars above us, govern our conditions";
(*King Lear*, Act IV, Scene 3)

but perhaps

"The fault, dear Brutus, is not in our stars, But in ourselves,"
(*Julius Caesar*, Act I, Scene 2)

TABLE OF CONTENTS

	Page
I. Introduction.....	548
A. Element Abundances and Nuclear Structure.....	548
B. Four Theories of the Origin of the Elements.....	550
C. General Features of Stellar Synthesis.....	550
II. Physical Processes Involved in Stellar Synthesis, Their Place of Occurrence, and the Time-Scales Associated with Them.....	551
A. Modes of Element Synthesis.....	551
B. Method of Assignment of Isotopes among Processes (i) to (viii).....	553
C. Abundances and Synthesis Assignments Given in the Appendix.....	555
D. Time-Scales for Different Modes of Synthesis.....	556
III. Hydrogen Burning, Helium Burning, the α Process, and Neutron Production.....	559
A. Cross-Section Factor and Reaction Rates.....	559
B. Pure Hydrogen Burning.....	562
C. Pure Helium Burning.....	565
D. α Process.....	567
E. Succession of Nuclear Fuels in an Evolving Star.....	568
F. Burning of Hydrogen and Helium with Mixtures of Other Elements; Stellar Neutron Sources.....	569
IV. e Process.....	577
V. s and r Processes: General Considerations.....	580
A. "Shielded" and "Shielding" Isobars and the s , r , p Processes.....	580
B. Neutron-Capture Cross Sections.....	581
C. General Dynamics of the s and r Processes.....	583
VI. Details of the s Process.....	583

* Supported in part by the joint program of the Office of Naval Research and the U. S. Atomic Energy Commission.

FIG. 1.2. A schematic diagram of the nuclear processes by which the synthesis of the elements in stars takes place. Elements synthesized by interactions with protons (hydrogen burning) are listed horizontally. Elements synthesized by interactions with alpha particles (helium burning) and by still more complicated processes are listed vertically. The details of the production of all of the known stable isotopes of carbon, nitrogen, oxygen, fluorine, neon, and sodium are shown completely. Neutron capture processes by which the highly charged heavy elements are synthesized are indicated by curved arrows. The production of radioactive Tc^{99} is indicated as an example for which there is astrophysical evidence of neutron capture at a slow rate over long periods of time in red giant stars. Similarly Cr^{54} , produced in supernovae, is an example of neutron synthesis at a rapid rate. The iron group is produced by a variety of nuclear reactions at equilibrium in the last stable stage of a star's evolution.

Abbiamo perso 27 unità di massa =
0.7 % della massa coinvolta nella reazione

$$E = m c^2$$

$$E_{\text{reazione}} = 4 \cdot 10^{-12} \text{ J}$$

Numero di atomi di idrogeno: 10^{57}

Ogni reazione coinvolge 4 atomi di idrogeno

Ogni reazione produce una energia di : $4 \cdot 10^{-12} \text{ J}$

Il Sole emette : $4 \cdot 10^{26} \text{ J} / \text{s} = 4 \cdot 10^{26} \text{ W}$

Ad ogni secondo si verificano : 10^{38} reazioni

Con questo tasso il sole potrebbe vivere per **70 miliardi di anni**

All'interno della stella avvengono delle reazioni tra le particelle chiamate reazioni nucleari:
